Day 45,625

Day 45,626

# Learning

We must make education effective and affordable. In our schools and colleges and then for ourselves. It is untenable that librarians do not get professional education because they will never be able to repay debt. That must change.

# Privacy and Security

We must spearhead privacy and security in this age of surveillance and monetizing our data. Security comes not through recording our phone calls but in stronger inclusive communities where neighbor knows and respects neighbor.

SURVEILLANCE

# Instilling Values

We must inject our values into corporations and governments alike. Library science must inform information science, computer science, and economics to do good as doing well.

The best reading, for the largest  
number, at the least cost  
number, at the least cost

Improve society through knowledge  
one community at a time

one community at a time
