

School of Information Studies
SYRACUSE UNIVERSITY

Are you fascinated by Science?

Do you have lab or field observation experience?

Do you get a kick out of configuring software apps?

If so, then apply to be one of the first eScience Librarianship fellows!!

The School of Information Studies has received a grant from the IMLS to educate a new breed of science librarian—one trained and ready to assist scientists who need to manage resources they generate while making cutting-edge discoveries using the latest technology while collaborating with colleagues in different places and disciplines.

There's lots of support to earn this MSLIS:

Full tuition scholarship

All required courses will be covered
so you don't have to go into debt!

A stipend to cover living expenses

Two years of support will let you
concentrate on your studies!

Mentorship from Cornell University Librarians

Learn from some of the
best science librarians working in the field!

A paid summer internship

Gain practical experience and first-hand knowledge
of meeting researchers' information needs in eScience!

Conference travel

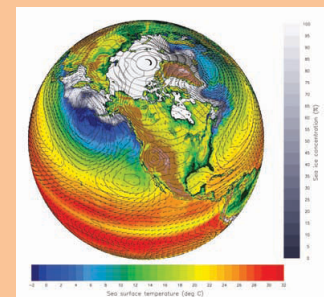

Attend a key national conference to present
project results or research and make connections!

What is eScience?

Scientists who use hardware, software and networks in combination (called cyberinfrastructure) conduct eScience.

They create massive amounts of data of all types, levels, scales, and formats and need the help of librarians to collect and organize these resources for Internet access.

Program questions?
