Gartner

Generative AI

- Text (large language models)
- Images (AI art, e.g., DALL-E)
- Video (synthetic video)
- Music (AI-generated music)
- Code (code-generation)
- Molecules (molecular discovery)
- Robotics (learn tasks)

CHATGPT STATISTICS

Time to reach 1 million users

Public Trust
Is an Issue...

Concern about artificial intelligence in daily life far outweighs excitement

% of U.S. adults who say the increased use of artificial intelligence in daily life makes them feel ...

Note: Respondents who did not give an answer are not shown.

Source: Survey conducted July 31-Aug. 6, 2023.

PEW RESEARCH CENTER

and It Is
Getting
Worse...

Most Americans Believe AI Will Decrease the Number of Jobs in the U.S.

In your opinion, what type of effect will artificial intelligence have on the total number of jobs in the United States in the next 10 years?

The Future of Jobs Report 2020

OCTOBER 2020

-
- According to the **World Economic Forum's "The Future of Jobs Report 2020"**, 85 million jobs globally will be replaced by AI by 2025. [The same report also indicates that AI can potentially generate 97 million new roles.](#)
 - <https://www.forbes.com/sites/kalinabryant/2023/05/31/how-ai-will-impact-the-next-generation-workforce/>

What is Artificial Intelligence (AI)?

- “engineered or machine-based system that can, for a given set of objectives, generate outputs such as predictions, recommendations, or decisions influencing real or virtual environments. AI systems are designed to operate with varying levels of autonomy” (National Institute on Standards and Technology, 2023)

AI is Here

- Music (Spotify)
- Search (Google)
- Fitness (Apple Watch)
- Cars (Intelligent Cruise Control)
- Toll Systems (Congestion Pricing in New York)
- Publishing (Amazon and Lit Journals)
- Productivity (Office, Google Docs)
- **Knowledge Infrastructure as Chimera**

Levels of AI

- **Level 1 - Rule-Based Systems:**

- These are basic AI systems that follow predefined rules and logic. They are capable of performing specific tasks where the rules are clearly defined, like simple chatbots or basic decision-making algorithms.

- **Level 2 - Machine Learning:**

- At this level, AI systems learn from data. They are not just following predefined rules but can adapt based on the data they are trained on. This includes things like recommendation systems, more advanced chatbots, and image recognition software.

- **Level 3 - Advanced Machine Learning:**

- This involves more complex algorithms, such as deep learning, that can handle tasks like natural language processing, complex image and speech recognition, and predictive analytics.

- **Level 4 - Autonomy:**

- AI at this level can make decisions and perform tasks with a high degree of autonomy. This is where you find self-driving cars, autonomous drones, and advanced robotics.

- **Level 5 - Artificial General Intelligence (AGI):**

- This is a theoretical level where AI would have cognitive abilities comparable to humans, capable of understanding and learning any intellectual task that a human being can.

- **Level 6 - Superintelligence:**

- Beyond AGI, this is a hypothetical scenario where AI surpasses human intelligence in all aspects – problem-solving, creativity, and even social intelligence.

“Make a 6 wedge pie chat with a mechanical brain framed with a circular frame at the center. Each wedge must be the same size.”

Muddled Vocabulary

Function: Diverse Data Sets, Privacy, Intellectual Property, Data Stewards, Data Hygiene, Ontological Development

Skill: Data literacy, Ontology/Taxonomy, Policy, Research Skills

Function: ADVOCACY for Explainable AI
Skill: Facilitation, Community Engagement

Function: Training, Hallucinations, Diverse Test Sets, Evaluation, Transparency

Skill: Project Management, Assessment

The Process

Structure and unstructured data

Data stored in databases and servers

Process the data using AI algorithms to detect patterns

Predictive signals are generated

Final Terms

- Generative AI
- Large Language Models
 - ChatGPT 3.5, Llama, PaLM, LaMDA
 - In Bard, Gemini, Dall-E
- Ethical AI
- Machine Learning/Deep Learning
- Explainable AI

Final Terms

- Generative AI
- Ethical AI
- Machine Learning/Deep Learning
- Explainable AI

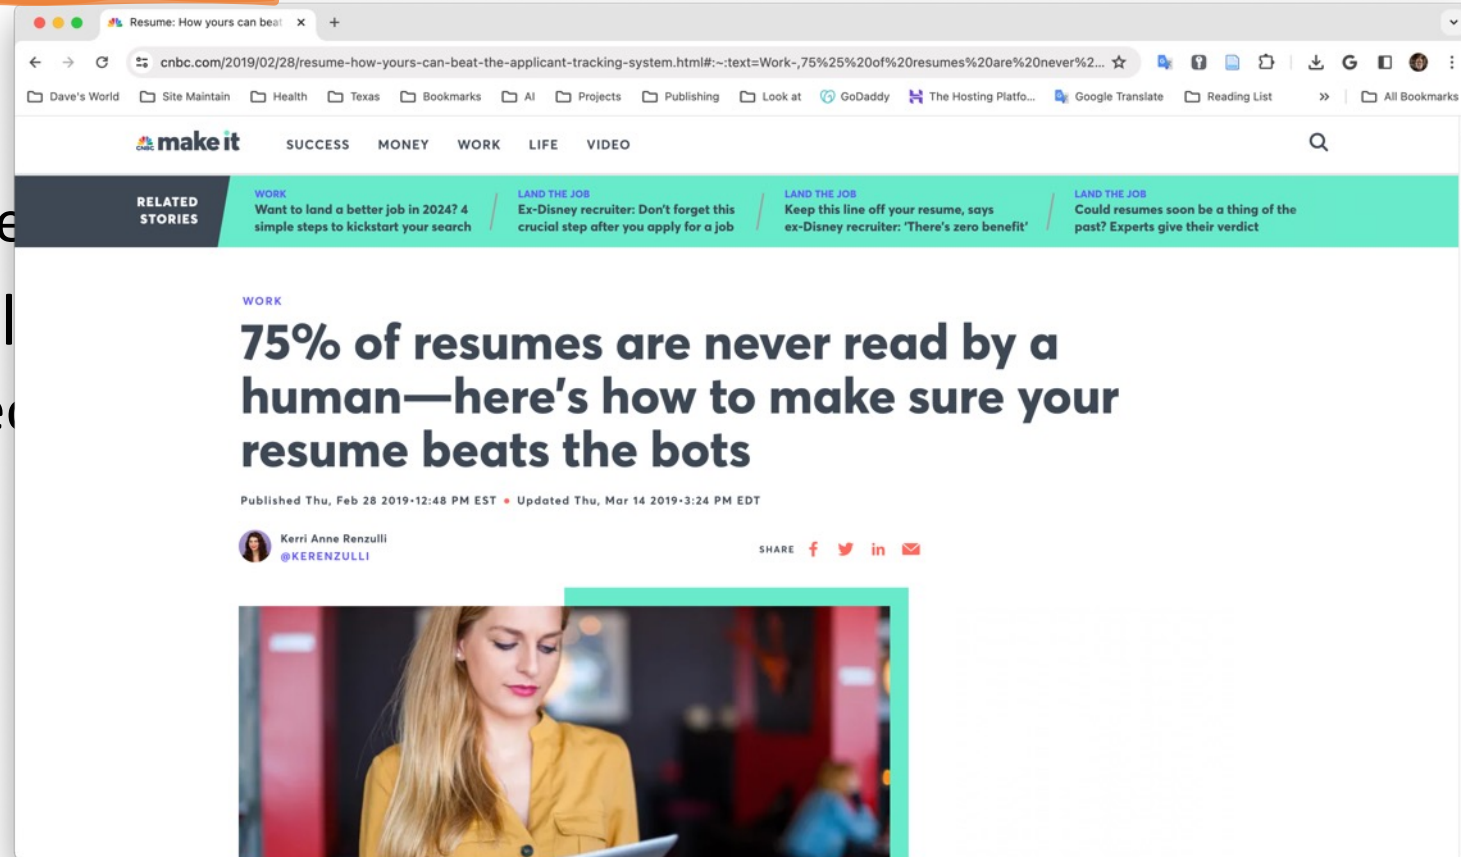

The Issues

- Bias
- Theft or broken copyright?
- Image Errors and Hallucinations
- Environmental Impacts
- Cabal of Players with Big Installed Advantage

The Use

- Extending your work
 - Social media postings, marketing
- Helping the Community Tell
 - Scripts to Narrations to Videos
- New Means of Interacting
 - Making a Chatbot (Poe.AI)
- Preparing the Community
 - Automated resume reading
